

IR dimmer for low voltage illumination 20 - 500 VA Order No.: 531 00

Infrared (IR) dimmer for switching and dimming of low voltage halogen lamps (equipped only with inductive transformers), 230 V standard incandescent lamps and 230 V halogen lamps. Switching and dimming commands can be released by pushing the push-button of dimmer, extension or IR-transmitter.

A short touch on the push-button causes switching, a long touch causes continuous dimming.

There are 2 possibilities for switching-on and dimming (fig. 1):

Memory switch = OFF:

Switching-on releases max. brightness
Dimming starts with min. brightness

Memory switch = ON:

Switching-on to last set brightness
Dimming starts with last set brightness

A switching-off of the dimmer is caused by interruptions of the 230 V supply lasting longer than 2 sec.
When overheated, the dimmer switches off automatically.
An electronic softstart saves the lamps.

Indications of danger

Caution! The installation and assembly of electrical equipment may be carried out only by a skilled person.

Not suitable for switching the lines potential-free.

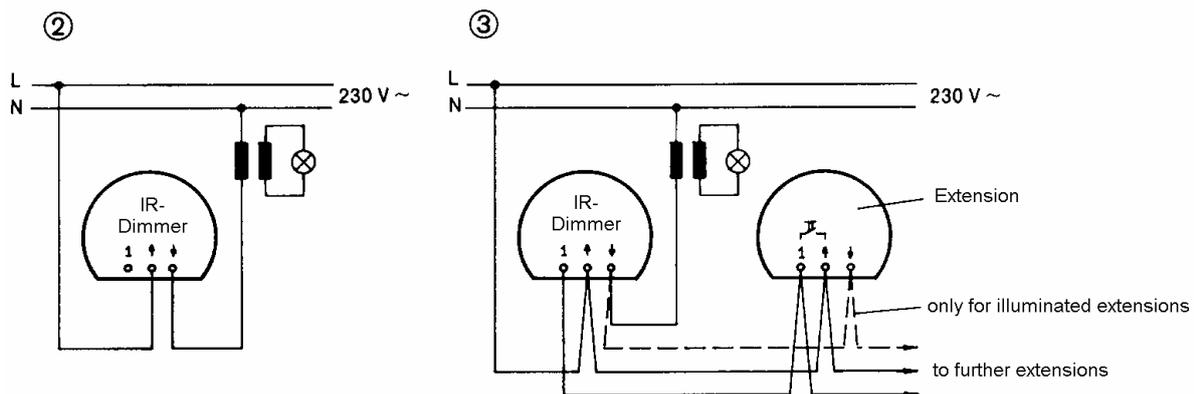

Disregarding the installation instructions may cause fire or other dangers.

Instructions for installation

The IR dimmer consists of an upper receiver part to be plugged into the lower power part (fig. 1). Before plugging-in the receiver, set the channel switch to the number (1...8) which is according to the push-button number of the IR-Transmitter (fig. 1).

For connexion see fig. 2.

When commands should be released from different places install extensions (fig. 3).

Depending on the installation the maximum load must be reduced:

- 10% for each 5°C exceeding of the ambient temperature of 25°C
- 15% for installation in wooden or hollow walls
- 20% for installation in multiple combinations

Other light sources may only emit rays to the receiver indirectly, otherwise the sensitivity will be reduced.

In case of malfunctioning the fuse in the lower part of the dimmer is to be checked at first. Use only fuses with the specified value.

In a low dimmer position control signals of power stations may be recognized as a short flickering.

A slight buzzing can be caused by the noise suppression choke.

Not suitable for connexion of power boosters.

Technical data

Power parts of the dimmer	
Rated voltage:	230 V ~
Rated load:	20 - 500 VA inductive transformers for LV-halogen lamps, 230 V incandescent lamps, HV-halogen lamps
Protection for short circuit and overload:	slow fuse T2 H 250 V
Noise suppression:	level N of VDE 0875 / 1
Extension:	push-button with a normally open contact f.eg. extension type „A“
Number of extensions:	unlimited (illuminated max. of 2)
Receiver part	
Transmitting media:	infrared light 950 nm
Carrier frequency:	455 kHz
Coding:	PPM Code, carried
Number of possible channels:	8

Acceptance of guarantee

We accept the guarantee in accordance with the corresponding legal provisions.

Please return the unit postage paid to our central service department giving a brief description of the fault:
