## Gira operating units for Revox multiroom system Perfect sound in every room

Gira M217/M218 regulating unit, colour aluminium  
Gira Esprit glass black

### The Revox multiroom system

A music system for perfect sound quality all over the house. Music or radio stations can be heard throughout the building and the sound in the various rooms can be varied and controlled in a sophisticated manner with operating units.

Up to 32 rooms can be supplied with music via the Revox M51 central unit. In the process it's possible to define four different listening zones of up to eight rooms each. Each listening zone can access its own music.

### The Gira operating units

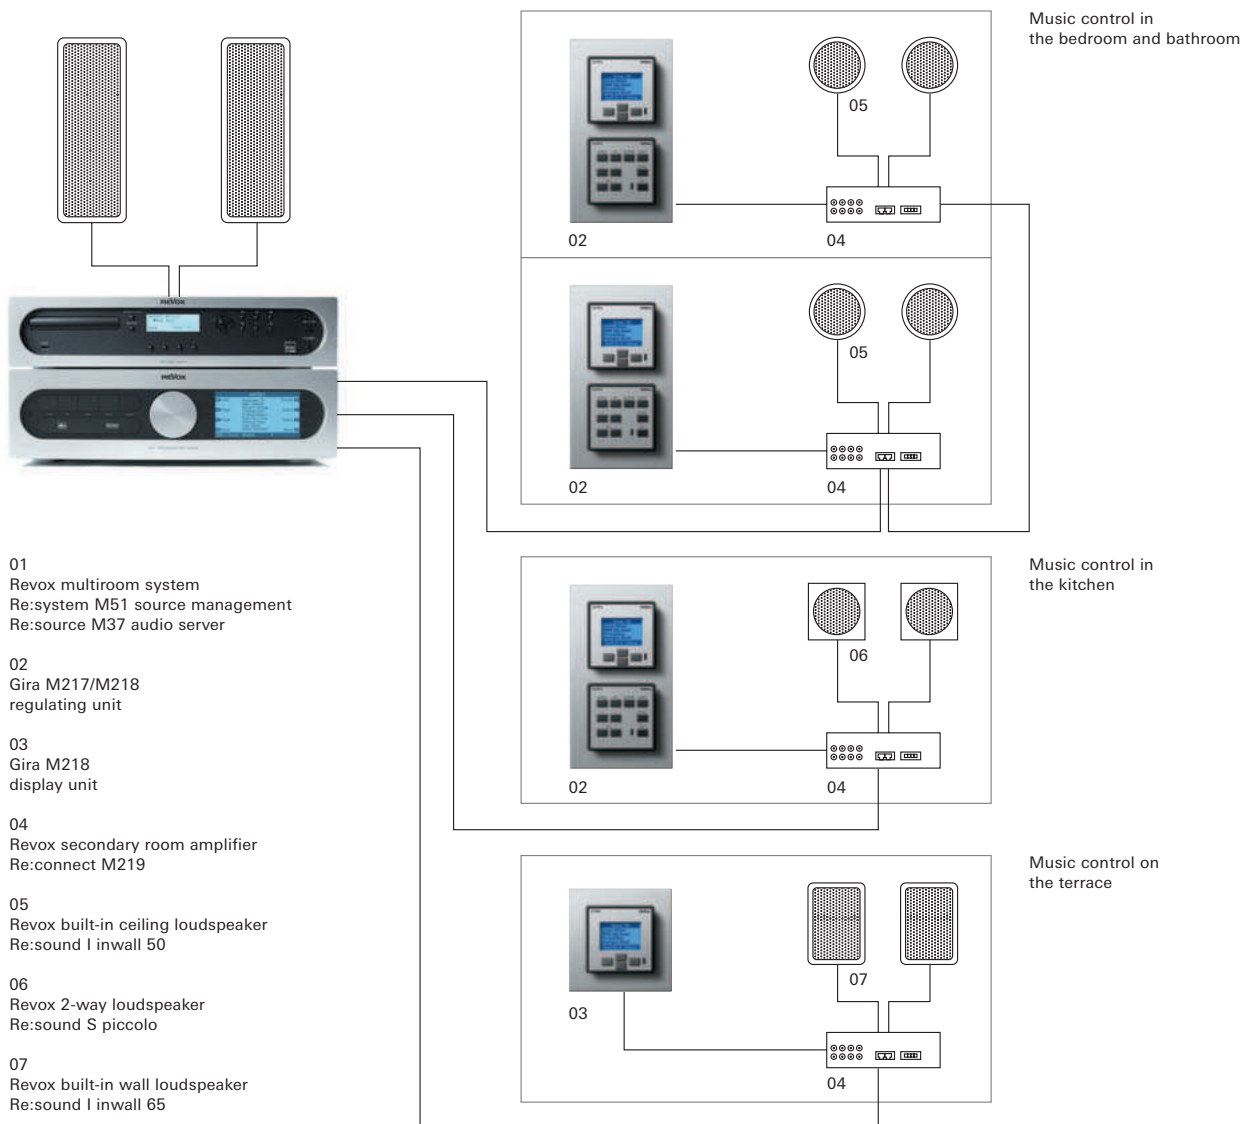

In cooperation with Revox, Gira offers the M218 operating unit and the M217 display unit for the Revox multiroom system. These control units make it possible to operate the Revox multiroom system from every room. This enables a uniform appearance with the rest of the electrical installation.

With the M218 operating unit, the Revox multiroom system can be activated at the press of single button - including volume control and station checking.

The Gira M217 display unit is the matching addition to this, as it expands the control options. The display shows information on the source of the Revox multiroom system currently played. And in addition to selecting a track or station, up to four timer functions can be programmed in each room.

Both units can be used individually. Virtually all important functions can also be controlled with the M217 by using the multi-function buttons.

Ideally, the Gira M218 operating unit and the Gira M217 display unit are combined in a 2-gang cover frame to produce the Gira M217/M218 regulating unit.

### Variations

The Gira M217 display unit and the Gira M218 operating unit can be installed individually or together and can be integrated in the cover frame of the Gira Standard 55, Gira E2, Gira Event, Gira Esprit and Gira E22 switch ranges.

They can be integrated in the Gira Stainless Steel and Gira TX\_44 ranges via a special intermediate frame.
