Safety notes**Note:
Electrician**

Electrical devices may only be installed and connected by a qualified electrician.

Failure to observe the instructions can result in damage to the device, fire, or other dangers.

Isolate before working on the device or load. Take account of all circuit breakers supplying dangerous voltage to the device or load.

Make sure to connect the protective conductor!

**Note:
Take note of the DIN VDE 0834.**

DIN VDE 0834 is binding, including the associated provisions applicable in this standard.

Function

The System Control Centre Plus manages and controls the Gira nurse call system 834 Plus. The device is connected to the Plus control centre and to the duty room terminal CT9 (where applicable) via the system bus (834 Plus LAN).

All devices in the call system are automatically recognised. The Gira nurse call system 834 Plus units can be subsequently inserted and removed into/from the Gira nurse call system.

The system central control unit Plus is ready for immediate use. Settings can be made via the configuration software.

**Note:
Read the system manual**

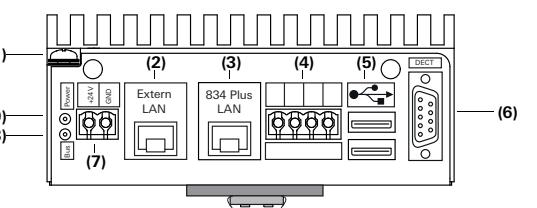

Familiarise yourself with all the possibilities of this device and the entire call system. Please read the call system 834 Plus System Manual and take advantage of the online help information in the configuration software. The system manual (also available in DE, FR, NL), can be found in its most recent version in the Gira download area:
<http://www.gira.de/service/download/>

Scope of supply

- System Control Centre with configuration software.
- Earthing wires and jumper.

Installation

The System Control Centre is provided for installation in a control cabinet/distribution box.

Connections**Key:**

| (4) | Not assigned | No image: Interface for Fire alarm system (FAS) on the opposite side of the device. | |
| (5) | 2 x USB-Port | | |
| (6) | RS 232 for DECT | | |

Fig. 1: Connections for the system control centre

Conditions for operation

To operate the system control centre Plus, a connection to the power supply and to the system bus is required. At least one system operational station control must be connected to the system bus.

- Room bus, ward bus and system bus are installed and ready for use.
- The corresponding terminating resistors (jumpers) must be set on the station bus.
- External power supply (Order No.: 2972 00 or Order No.: 2973 00) is installed and ready for operation. Use a device plug for connection.
- Commissioning PC with Internet browser and LAN connection, as well as a network cable, are available.

Activation

1. Connect the power supply to the system control centre.

**Important!
Power for the system control centre**

The System Control Centre Plus does not have its own power switch. Immediately after connection of the power supply, the Control Centre Plus boots up. This process lasts up to two minutes.

2. Connect your commissioning PC via network cable to the connector "External LAN".

**Note:
IP address range of the commissioning PC**

Note that the IP address of your commissioning PC is between 192.168.0.1 and 192.168.0.254 (not 192.168.0.111) (subnet mask: 255.255.255.0). Further information is available in the system manual.

3. Open the internet browser on your commissioning PC. Enter the IP address: 192.168.0.111 in the address field of the Internet browser.

The start screen of the configuration software displays.

GIRA Assistant for nurse call system Plus

Welcome!

(only used for this session)English

Fig. 2: The start screen of the configuration software

Registration:

1. Choose the language in which you would like to launch the configuration software.
2. In the field **Administrator Name**, enter "admin" and in the **Password** field, "admin".
3. Click on "Log in".

**Note:
Configuration of a system**

First install all devices belonging to the system before beginning configuration.

All installed devices in a system are automatically recognised.

The overview page of the configuration software displays.

You can now make further adjustments to the system.

**Note:
Connect the call system 834 Plus to an existing network**

Before making network settings, coordinate with the relevant network administrator.

To connect the system control centre to an existing (hospital) network, the "External LAN" connection can be configured in the configuration software via the menu item **Administration->Set network access**, see Fig. 3.

No. (1).

Note: Connect the system control centre to a time server

In order to obtain the system time of the nurse call system 834 Plus automatically over a time server (NTP server) on the Internet, the system control centre must be connected via the "External LAN" connection to an external network (e.g. company or hospital network).

Warranty

The warranty is provided in accordance with statutory requirements via the retailer.

Please submit or send faulty devices postage paid and with an error description to your sales representative (retailer/installation company).

They will forward the devices to the Gira Service Centre.

Disposal**Disposal information:
Device may not be disposed of with general household waste!**

Please observe the European Directive 2012/19/EC regarding disposal of electrical and electronic equipment.

Electrical and electronic equipment

- may contain dangerous substances harmful to health and the environment,
- or valuable materials for recycling.

Therefore do not dispose of in general household waste.

Electrical and electronic equipment can be returned to public collection points for environmentally safe disposal.

Technical data

Device type in accordance with Regulation no. 617-2013 (EU)
Integrated desktop computer, Category "B"

Operating voltage: DC 24 V

Electricity consumption: 300 mA

Power consumption: approx. 7.2 W

Ambient temperature: -5 °C to +45 °C

Protection type: IP 20

Connection terminals: Ø 1.5 mm²

Installation: on a DIN top hat rail
